Gentlemen:

In our letter of July 17, 1973, we reported an asbestos consumption of 8.8 tons per day at the St. Louis plant. The attached correspondence from Mr. P. E. Teague, Plant Manager, shows that figure to be incorrect. Fiber consumption is actually 18.8 tons per day, an amount that agrees with process usage reported to EPA Region VII in connection with National Emission Standards for Hazardous Air Pollutants.

We regret any inconvenience this error may have caused.

Very truly yours,

GAF CORPORATION

H. J. Holloway

INTEROFFICE CORRESPONDENCE

GAF Corporation

DATE August 10, 1973

TO Mr. H. J. Hollcway
LOCATION Linden

cc Mr. J. Bachesta - St. Louis

FROM Mr. P. E. Teague
LOCATION St. Louis

SUBJECT: ASBESTOS FIBER USAGE - UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REPORT

In confirmation of information provided telephonically by Jim Bachesta, our daily usage of asbestos fiber is approximately eighteen and eight-tenths (18.8) tons.

A digit must have been inadvertently dropped in our original report of eight and eight-tenths (8.8) tons daily usage.

P. E. Teague
